On Wednesday 10th September we went to City of Canterbury Council chambers for the Schools litter forum.

We participated in three activities and talked about how litter effects the environment and the animals. One of the activities was looking at the types of rubbish in the Cooks River. There was lots of plastic and even a doll. Another activity was looking at a model of a river and how the litter went into the river when it rained.

We also met the Mayor and representatives from the environment@Lakemba project. These people have been working hard to audit the litter on Haldon Street and come up with ways to reduce the litter in the area.

It was an interesting and fun day. We learned a lot about litter and how it effects the environment. Next term we will take action to reduce litter in our school.
